PROFESSIONAL SUMMARY

Senior Java Software Engineer with 10+ years of backend experience in iGaming, telecom and banking, building business-critical, high-load systems with Java 21 / 25, Spring Boot and microservices. Currently owns key services across risk management, retail payments, settlement and regulatory integrations on a B2B iGaming platform serving 100+ operators and 150M transactions per day. Drives the technical design of critical initiatives, mentors engineers and previously led a team of 3 Java developers. Collaborates across Agile / Scrum teams, shipping through staged releases and feature flags.

KEY ACHIEVEMENTS

- Led the settlement pipeline redesign (**10,000+ bets/min**) and Payment Gateway migration across **3 services, 2 teams**.
- Nearly halved redundant external API calls (**~48%**) and cut payment latency by **~150 ms** with Redis caching.
- Upgraded **7 services** to Spring Boot 4 / Java 25; raised critical-service test coverage from **~60% to 80%+**.
- Led a team of **3 Java developers** at Brightfin; split a critical monolith service into **5 microservices**.
- Built **9 carrier and MDM integrations** at MobiChord for a platform serving a Fortune 100 client with **160,000+ devices**.

TECHNICAL SKILLS

Languages & Frameworks: Java 17 / 21 / 25, SQL, Spring Boot, Spring Cloud, Spring Data JPA, Spring Security, Hibernate / JPA, OpenFeign, Bucket4j, Multithreading / Concurrency

Architecture: Microservices, Distributed Systems, High-Load Systems, Event-Driven Architecture, System Design, DDD, CQRS, Clean / Hexagonal Architecture, REST, SOAP, OpenAPI / Swagger, WebSocket

Databases & Messaging: PostgreSQL, MongoDB, Redis, Elasticsearch, Liquibase, Flyway, RabbitMQ, Apache Kafka, ActiveMQ (JMS)

Cloud & DevOps: AWS (EC2, RDS, S3, Lambda), Docker, Kubernetes, Helm, Terraform, HashiCorp Vault, GitLab CI/CD, GitHub Actions, Git, Maven, Gradle, Bazel

Observability & Testing: Datadog, Prometheus, Grafana, ELK Stack, OpenTelemetry, JUnit, Mockito, Testcontainers, WebMvcTest, SonarQube, TDD

Ways of Working: Agile / Scrum, Code Review, Mentoring, Technical Design, Spec-Driven Development, AI-assisted development (Claude Code, AWS Kiro)

PROFESSIONAL EXPERIENCE

Atlaslive · B2B iGaming platform

Senior Java Software Engineer Apr 2024 – Present

Backend services across the risk management, settlement, payments, retail and bonus domains.

- Led the redesign of the high-load asynchronous settlement pipeline (10,000+ bets per minute): authored the technical design; split new and retry records into independent polling streams with dedicated thread pools and batch PostgreSQL fetching, so retries no longer starve new transactions; drove a phased rollout behind feature flags.
- Drove the payments migration from a legacy provider adapter to a Payment Gateway architecture across 3 services, coordinating with 2 teams; unified routing and reduced coupling; later led the move to the gateway's v2 API.
- Introduced distributed Redis caching for Payment Gateway integrations, replacing a local cache: 97% hit rate, ~48% fewer redundant external API calls, ~150 ms lower average latency.
- Upgraded 7 services in staged releases (Spring Boot 3 → 4, Java 17 → 21 → 25, RabbitMQ 4.0); raised critical-service test coverage from ~60% to 80%+ (JUnit, Mockito, Testcontainers).
- Removed performance bottlenecks in risk-management workloads: PostgreSQL query optimization, concurrently built indexes (no write blocking), Kubernetes HPA tuning, pessimistic locking against lock contention.
- Served as an escalation point for critical production incidents: led root-cause analysis and post-mortems; fixed lost events, connection leaks and N+1 queries (Datadog, Prometheus, Grafana).
- Mentored 2 engineers through code reviews and technical design reviews across the team.

- Implemented support for 2 sportsbook providers (Altenar, FIRST.bet), evolving the platform in 2026 into a multi-sportsbook ecosystem for LatAm operators.
- Designed a regulatory integration layer of REST APIs for several regulator types; extended provider integrations (credit, cash-out, free-bet, responsible-gaming limits) and real-time WebSocket bonus updates.

Brightfin · ServiceNow-native TEM and MDM / UEM platform for enterprise and government customers

Senior Java Software Engineer Sep 2022 – Jan 2024

Java Software Engineer May 2021 – Sep 2022

- Led a team of 3 Java developers after the previous lead left: technical design, mentoring, code review, quality standards and cross-team coordination; promoted to Senior in Sep 2022.
- Migrated a critical platform service from a monolith to 5 microservices, enabling independent deployment and better scalability; took part in the move to a Bazel mono-repo.
- Designed and built core TEM and UEM microservices and REST APIs (MongoDB multi-tenant configuration): device enrollment, provisioning, configuration, app deployment and compliance reporting.
- Built the integration layer for carrier and MDM / UEM provider APIs, including asynchronous device-enrollment and MACD (moves, adds, changes, disconnects) workflows.
- Built rate limiting with Bucket4j and Redis against DDoS and resource abuse; automated certificate renewal with HashiCorp Vault.
- Owned the TEM billing multi-upload feature end to end, from design to deployment and production support.
- Optimized performance and cloud resource usage on AWS; sped up real-time usage calculation and inventory reports.

MobiChord · ServiceNow-native MDM and carrier integration platform

Java Software Engineer Mar 2018 – May 2021

- Designed and built 9 integrations with telecom carriers (AT&T, Verizon, T-Mobile, Telus) and MDM providers (Jamf Pro, MobileIron, Microsoft Intune, MaaS360, BlackBerry) for a platform whose clients included a Fortune 100 company with 160,000+ mobile devices.
- Built a carrier API service with MACD support (ordering, price-plan changes, roaming) and a MongoDB inventory reporting service with a device and accessory catalog.
- Built a mid-server for secure, encrypted file transfer between SFTP and ServiceNow.
- Introduced unit, integration and end-to-end tests that enabled reliable CI/CD; resolved critical production incidents (Prometheus, Grafana, ELK).

Luxoft · Investment banking: OTC-derivatives trade processing

Junior Java Developer (started as Java Intern) Apr 2016 – Mar 2018

- Built an event-driven order-processing pipeline handling 10,000+ transactions/day with guaranteed ordering.
- Automated multi-system data aggregation for regulatory reports, cutting report time from 2 hours to 15 minutes.
- Integrated a CRM system with the banking backend with transactional consistency; built a reusable Gradle plugin.

PERSONAL PROJECTS

ReadyBell – multi-tenant SaaS | github.com/jmarkuz/ReadyBell
Order-ready alerts for restaurants via a QR tracking page and Web Push. Java 21, Spring Boot 3.4, PostgreSQL, Redis, React, TypeScript

Vacancy Tracker – self-hosted tool | github.com/jmarkuz/vacancy-tracker
Scheduled vacancy collection, de-duplication, scoring and application tracking. Java 21, Spring Boot 3.5, PostgreSQL, Flyway, Testcontainers

EDUCATION

Master of Science (MSc) in Mathematics – Drohobych Ivan Franko State Pedagogical University 2007 – 2012

CERTIFICATIONS

Google AI Professional Certificate – Google | Java Design Patterns and Architecture – Udemy

LANGUAGES

English – Professional working proficiency (B2) | Ukrainian – Native
